

專題演講 TALK

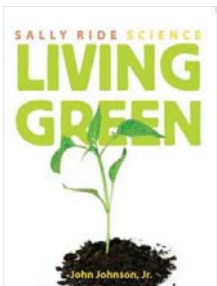

香港邁向
碳中和
CarbOn Neutral@HK

The warming of the atmosphere, oceans and land masses by human influence is indisputable. Human-induced climate change has affected every region of the world and caused many problems such as heat waves and extreme rainfall, severe tropical cyclones, etc. In Hong Kong, extreme weather is becoming more and more frequent and there is no time to lose in mitigating the climate crisis. Education is the most fundamental way to change concepts and behaviors.
